

ABSTRACT

The present invention provides a foldable tent frame typically comprised of two upper braces pivoted on the static hub fastened on the tip end of the pole and two low braces pivoted on the sliding hub fitting on the pole, said upper and low brace are inter-pivoted at the cross point to form a unit of brace set; wherein said cross pivoted point of side low braces is setoff forward far from the pole. As utilizing above-mentioned project, as pitching up the tent, the cross pivoted point and inter-pivoted points of the upper and low braces are lift up in height simultaneously.
